SUMMARY

Product Owner with 5+ years in the nonprofit sector, designing and directing end-to-end digital systems — from product vision to the dashboard people use every day. Focuses on solving the real operational process first, then choosing the right technology to support it, across accounting, donor operations, automation and analytics.

EXPERIENCE

Digital Systems & Operations — Al-Boraq Charity Organization

Cairo, Egypt · 2023 — Present

- Managed call-center workflows, representatives, reports and operational follow-up.
- Designed and developed digital systems for donations, accounting, reporting and internal operations.
- Connected data sources and built analytical reports for activities, channels and periods.
- Worked across business requirements, process design, implementation and system improvement.

SELECTED PROJECTS

Al-Boraq Accounts

Flask · Supabase · Vercel

Financial management system covering purchasing, reporting, analytics and controlled access, with row-level security, a restorable audit log and AI revenue forecasting.

BORAQ SYSTEM 2026

Streamlit · Google Sheets

Donation analytics dashboard with multi-level drill-down filtering and AI forecasting — the organization's first digital system.

Call Center System

Next.js · Supabase

Full call log, monthly-donor churn detection and accurate daily reporting for donor operations.

WhatsApp Business Platform

WhatsApp Business API

Direct donation channel over WhatsApp with a custom interface built around the organization's brand.
